v2.1 Release Notes

CIPA e-Delivery v2.1 Release Notes

28 May 2014

The CIPA e-Delivery team is proud to present **CIPA e-Delivery v2.1**

The release includes the following CIPA e-Delivery components:

- AP v2.1
- SMP v2.1

The main focus of this release has been to improve the Access Point with a stable AS2 implementation and fully compliant with the OpenPEPPOL AS2 specifications. It also includes an improved test framework.

See below for more details

Improvements and new features

The following improvements have been implemented in this release

AP

- [EDELIVERY-222] - Create common interface for sending messages using START, AS2
- [EDELIVERY-136] - Implement AS/2 protocol support next to the START protocol
- [EDELIVERY-223] - Improve memory handling (in the AS2 wrapper)
- [EDELIVERY-180] - Enable the wrapper sendwebservice to deal with big files

Test Framework

- General update of test case details for all components:
    - improved existing test cases; and
    - added additional tests based on change requests and bug reports
- Updated AP client to latest AP source code

Bug fixes

The following bug fixes have been made in this release

AP

- [EDELIVERY-240] - Unable to register and use SFTI (Single Face To

Industry) Process Identifiers in CIPA Components (SML, SMP, AP)

SMP

- [EDELIVERY-242] - Unable to specify two different transport profiles for the same Participant/Document/ProcessList combination

Known issues and limitations
